Abstract

Travel Planner and Trip Organizer is a web-based system that helps the users to easily and quickly plan out their trips in one place. This web-based system has a Travel Planner and Trip Organizer that aids the users in planning and booking their travels, keeping track of their expenses, arranging their activities, organizing their pack list, saving their destinations, storing their travel information and keeping their travel details in a dashboard. Other features include journey logbook, photo gallery profile notification and admin panel. It has a React as the front end while using node.js and Express as back end and MySQL database. The main aim of the system is to make the process easy and fast and be able to lessen the hassle of having to use different app to take care of the travel information.

1. Introduction

Travel planning consists of several tasks, such as choosing destinations, arranging transportation and lodging, creating packing lists, scheduling activities, and keeping track of expenses. Handling these aspects individually can make it challenging to organize information and oversee the trip altogether.

The Travel Planner and Trip Organizer was created to offer a single platform for handling travel-related tasks. Through a web interface, users can keep track of trip details, access key information, log expenses, and arrange their travel activities.

1.1 Problem Statement

Travel information is saved to various apps papers notes, spreadsheets, and even documents. If you think about it, it can make all the things you need quite hard to find, manage the costs, and to handle your trip schedule. As such, you are in need of a single system.

1.2 Project Objectives

- To have an online destination for organizing users' travel plans.
- For enabling users to create view update and organize trips.
- For keeping track of activity bookings expenses packing items and places saved.
- To offer amenities where travelers can record their journeys and keep pictures of their trips.
- To provide management of user accounts, notifications, and administration.

1.3 Project Scope

This project is to create web-based travel organization and record keeping system. This is to enable the management of trips and other information that covers all the journey needs in a single application. This application is for those who wish to plan their personal trips more efficiently.
